DETAILED ACTION

1. The examiner of record has changed from M. Daniels to Edmund Lee.
2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 21-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rusk (USPN 3364630) in view of Kolberg (USPN 3355772) as set forth in the Office action mailed 5/1/07.
4. Applicant's arguments filed 7/31/07 have been fully considered but they are not persuasive. Applicant argues that Rusk does not teach using a core element having the claimed size and a mold section having the claimed diameter. This argument appears to be drawn to a particular size. However, the particular size of the center passage formed is insufficient to distinguish the claimed *method of making* from the prior art, which provides the same or substantially the same method of making. Changes in size are generally insufficient to establish patentability. *In Gardner v. TEC Systems, Inc.*, 725 F.2d 1338, 220 USPQ 777 (Fed. Cir. 1984), cert. denied, 469 U.S. 830, 225 USPQ 232 (1984). Each of the three references could perform the intended use of holding a workpiece and being held by a spindle. Furthermore, the claimed size of the core element would have been obvious to one of ordinary skill since shrinkage of polymeric material is taken into account when determining sizes of mold tools. Using a core element having a slighter larger cross-section than a workpiece would have been

obvious in order to ensure that the liner, after cooling and shrinking, would fit over the workpiece. Likewise, using a mold section having a slightly smaller inner dimension would have been obvious in order to ensure that the liner, after cooling and shrinking, would slip into the opening of the spindle.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **EDMUND H. LEE** whose telephone number is **571.272.1204**. The examiner can normally be reached on **MONDAY-THURSDAY FROM 9AM-4PM**.
